A: In recent versions of Delphi, the component cannot be the last component in a TForm. You need to write with MyForm.Text1 do ShowModal; instead of with Text1 do ShowModal; This is a bug in the IDE. Your call to ShowModal is shown as CancelButton, and they are shown in the same position. Note that TComponent.ShowModal and TComponent.ShowModalTimeout are actually a different implementation. The latter is used when the modal window is not visible at the time the action is scheduled. When creating a modal form, there is no need to schedule the action. Alternatively, a form with no Modal component could be used. 1. Field of the Invention This invention relates to camshaft phaser assemblies, and more particularly to an improved camshaft phaser assembly with a structural module comprising a drive shaft, a camshaft idler and a camshaft gear, wherein the structural module is adapted to improve the efficiency of the camshaft phaser assembly by reducing friction and wear of the gears in the camshaft phaser assembly. 2. Description of Related Art Camshaft phasers are typically used in internal combustion engines to adjust the phase of a camshaft relative to a crankshaft to advance or retard the timing of engine valve events. One type of camshaft phaser has a rotor sandwiched between two stators, wherein the stators are secured to a hub and a housing, respectively, that is rotatable with the camshaft. Such camshaft phasers vary the

angular relationship between the camshaft and the crankshaft to incrementally adjust the phase of the camshaft relative to the crankshaft, thereby controlling engine valve timing in response to sensed engine parameters (e.g., load, etc.). An electro-hydraulically controlled camshaft phaser generally has a drive gear and a driven gear that are interconnected via a mechanical drive chain or sprocket and a mechanical drive sprocket. The drive gear has a drive sprocket or pulley for engaging a chain or sprocket and the driven gear has a driven sprocket or pulley for engaging the chain or sprocket. The driven gear is driven by the electro-hydraulically controlled camshaft phaser to rotate in one direction. The driven gear, which is typically
