The time-of-flight (TOF) distance-measuring method measures the time needed for light to travel between the camera and a point in space (it also measures the distance). The camera's shutter remains open while it is taking measurements, so the overall exposure time is relatively long. The camera automatically adjusts the exposure based on the ambient light conditions, but these settings cannot be customized. When Autodesk introduced AutoCAD 2D drawing software in 1989, they also released a 3D software application named AutoCAD 3D. The first 3D version of AutoCAD, released in 1994, used a proprietary file format based on the VRML standard. Autodesk subsequently released other 3D CAD software applications such as Civil 3D, Inventor, and AutoCAD Mechanical, as well as an open-source free-to-use alternative to AutoCAD named FreeCAD. AutoCAD 3D was integrated into AutoCAD in the mid-2000s. Manufacturing applications AutoCAD is used for a variety of tasks in various manufacturing industries. For example, it is used by Boeing, which produces the C-17 Globemaster III heavy transport aircraft and the 787 Dreamliner.[2] It is also used in designing mechanical components for major motion picture and television productions.[3] Construction applications Another common use of AutoCAD is in the construction industry, where building plans and specifications are prepared and exchanged. Software programs including Autodesk Vaulted Building Designer, Autodesk StairPlanner, and Autodesk Volume Builder are designed to be used with AutoCAD to create architectural and engineering designs and specifications. Construction industry software such as Architectural Design System (ADS), Building Analyst, Eco-Schools, EcoForm, and Plant3D are also used with AutoCAD. AutoCAD is used in other fields of construction, including for surveying and land mapping. Surveying software such as MapInfo, GPS Surveyor, GeoCAD, and SurveyCAD are designed to be used with AutoCAD. Land mapping software including AutoCAD Map 3D and GISPAS are designed to be used with AutoCAD. Military applications AutoCAD is used for military and police applications, including for laying out defenses and for planning mass casualty rescue operations. Military CAD software, such as the Defense Mapping Agency's MiCAD, is integrated with AutoCAD.
